(54) Title: METHOD OF IMPROVING THE OUTPUT UNIFORMITY OF A DISPLAY DEVICE

(57) Abstract: This invention relates to a method of improving the output uniformity of a display device (1), such as a self light emitting display device, comprising the following steps; detecting a first emitted brightness of at least one pixel (5) of said display device (1); by means of the detected first brightness, determining the non-uniformity of an output of a driver circuit (3) being connected with said at least one pixel (5); and based on said first detected brightness, generating a calibration factor for the at least one pixel (5), to be used to modify the output of the driver circuit (3), in order to improve the uniformity.

° Special categories of cited documents :

- "A" document defining the general state of the art which is not considered to be of particular relevance
- "E" earlier document but published on or after the international filing date
- "L" document which may throw doubts on priority claim(s) or which is cited to establish the publication date of another citation or other special reason (as specified)
- "O" document referring to an oral disclosure, use, exhibition or other means
- "P" document published prior to the international filing date but later than the priority date claimed

- "T" later document published after the international filing date or priority date and not in conflict with the application but cited to understand the principle or theory underlying the invention
- "X" document of particular relevance; the claimed invention cannot be considered novel or cannot be considered to involve an inventive step when the document is taken alone
- "Y" document of particular relevance; the claimed invention cannot be considered to involve an inventive step when the document is combined with one or more other such documents, such combination being obvious to a person skilled in the art.
- "&" document member of the same patent family
